

# ServeNear MVP Handover Document

## 1. Product Summary

ServeNear is a township-focused local services marketplace that connects customers with nearby service providers.

The MVP supports three user roles:

1. Customer
2. Service Provider
3. Admin

The product demonstrates the core journey of searching for a provider, booking a service, managing the job, messaging between users, leaving reviews and verifying providers.

---

## 2. Core User Journeys

### Customer Journey

1. Customer registers or logs in.
2. Customer searches for a service provider.
3. Customer views provider profile.
4. Customer sends booking request.
5. Customer messages provider.
6. Customer tracks booking status.
7. Customer leaves review after completed service.

### Provider Journey

1. Provider registers or logs in.
2. Provider views incoming booking requests.
3. Provider accepts or declines a booking.
4. Provider messages customer.
5. Provider marks job as completed.
6. Provider views customer reviews.
7. Provider updates service/profile details.

### Admin Journey

1. Admin registers or logs in.
2. Admin views platform summary.

3. Admin views users.
  4. Admin views bookings.
  5. Admin updates provider verification.
  6. Admin uses QA checklist and demo reset controls.
- 

### 3. Current Technical Setup

The MVP is built using:

- React
- Vite
- React Router
- JavaScript
- CSS
- localStorage

No external backend is connected yet.

---

### 4. Storage Approach

The MVP currently stores demo data in browser localStorage.

Main storage keys:

servenear\_users  
servenear\_current\_user  
servenear\_bookings  
servenear\_messages  
servenear\_reviews  
servenear\_provider\_profile

---

### 5. Important Project Folders

src/components

Contains reusable UI, layout, auth, demo and messaging components.

src/pages

Contains public, customer, provider and admin pages.

src/routes

Contains the main route setup and protected role-based routes.

src/utils

Contains localStorage helper files for auth, bookings, messages, reviews, provider profile and demo reset controls.

src/data

Contains mock data for service categories and default providers.

---

## 6. Completed MVP Features

### Authentication

- Mock registration
- Mock login
- Logout
- Role-based routing
- Protected routes

### Customer

- Customer dashboard
- Search providers
- Filter by category and area
- Provider profile
- Booking form
- My bookings
- Messaging
- Reviews

### Provider

- Provider dashboard
- Incoming jobs
- Accept/decline jobs
- Mark completed
- Messaging
- Reviews
- Service management

- Profile settings

## **Admin**

- Admin dashboard
  - Users list
  - Bookings list
  - Provider verification
  - QA checklist
  - Demo reset controls
- 

## **7. Known Limitations**

- Authentication is mocked and not secure.
  - Data is stored in localStorage only.
  - Demo data is browser-specific.
  - Only one editable provider profile is connected to the customer-facing provider list.
  - Payments are not implemented.
  - File uploads are not implemented.
  - Messaging is not real-time.
  - Admin verification is a simple demo status.
  - No backend database is connected yet.
- 

## **8. Recommended Next Steps**

### **Next Development Step**

Connect Supabase for:

- Real authentication
- Database tables
- User roles
- Bookings
- Messages
- Reviews
- Provider profiles
- Row-level security

### **Future Product Improvements**

- Real provider verification document upload
- Payment confirmation or payment gateway
- Real-time messaging

- Email or push notifications
  - Location-based search
  - Advanced filtering
  - Improved admin moderation
  - Provider analytics dashboard
- 

## 9. Demo Reset Instructions

Admin users can go to:

/admin/qa

They can use:

Clear App Demo Data

to clear bookings, messages, reviews and provider profile changes.

They can use:

Clear Everything

to remove all demo users and reset the full demo state.

---

## 10. Final Handover Note

This MVP is suitable for demonstrating the core ServeNear concept, user journeys and product logic.

It should be treated as a functional prototype or demo MVP, not a live production system for real customer/provider use.
